

Directions to View an Assessment Map

In order to view an assessment map you will need to use the [OneStop Web Geographic Information System \(GIS\) Application](#).

Print out the following directions before you use the application to make sure you are viewing the correct assessment map:

Step 1:

Under **To Begin**: Select the **Start GIS** icon

Step 2:

At the User Registration window enter your user information:

Enter your pin and password if you have one already.

If you don't:

Select the [OneStop Data Retrieval Registration Form](#) to obtain a pin and password (please note this may take a few days to obtain).

Or you can proceed to view an assessment map with limited data layers without registering by clicking on the box to enter as an unregistered guest.

Select the **START** button.

Step 3:

When the map appears you can select the GIS data layers that you'd like by clicking on the Plus **+** button in the green **"Other Tools"** box at the top. A box appears that lists all the layers that you can add. If you have entered as an unregistered guest the layers that are not available for viewing will be shaded gray*.

Check the box for the following layers:

Remediation Sites

Hazardous Waste Generators

UST Facilities

AST Facilities

Auto Salvage Yards

Public Water Supply Sources *

Drinking Water Protection Areas*

Pesticide Application Areas

Local PCS Inventory

Roads

Hydrography

Non-point sources (which are on the assessment maps but were not used to complete the assessments)

*In the interest of Homeland Security, these data are available only to Registered Users of NHDES OneStop Data Retrieval systems.

-The water & sewer distribution lines used in the assessments are not available to view at this time.

Then select the **Add/Remove** button.

Make sure the “Active” and “Visible” boxes for the following categories under the **Map Layer Control** section on the right side of your screen are checked.

Step 4:

Once you have selected the correct layers there are several ways to view a certain assessment area. You can search by County, Quadrangle, Site, Town or Watershed. The quickest way is to select *Site/Facility*, which lets you search by public water system. In the “**Other Tools**” box at the upper right select the Eyeglasses  button. When the window appears select *Site/Facility* under the **Select View Extent Option** section on the left. On the right, select *Public Water Supply Source* to the right of **Extent Layer**. Then you can search by Master ID, Site ID, Name, Address or Town. For example under Site ID you need to enter the EPA # and source ID (i.e. 0501010-002), ten digits in all plus the dash.

Then select 

If you can't see the whole source protection area then select the Zoom Out Tool  above the map, then click on the center of the map. (You may need to repeat this step several times).

Now you can identify what the sites are by clicking on the  button in the green “On Mouse Click” box at the top of the screen and then click on the site you'd like to identify.

To go to a different assessment area map just start at Step 3.

For more options and/or directions on using the OneStop GIS Web Application, [Go To OneStop Web GIS Help](#) from the main OneStop GIS page.

Note: There may be sites that are on the Web GIS that are not on your assessment map. The Web GIS is more up to date as new sites are added every day. The assessments are a snapshot in time using the GIS information at the time of the assessment.
